

<b>PRELIMINARIES</b>	<b><i>i</i></b>
<b>CHAPTER 1      <i>Introductions</i></b>	<b><i>1</i></b>
What is a model? .....	1
Fundamental physics, mathematical methods, and physical parameterizations .....	4
Numerical experimentation .....	6
<b>CHAPTER 2      <i>Basic Concepts</i></b>	<b><i>9</i></b>
Finite-difference quotients .....	9
Difference quotients of higher accuracy .....	13
Extension to two dimensions .....	20
An example of a finite difference-approximation to a differential equation .....	23
Accuracy and truncation error of a finite-difference scheme. ....	26
Discretization error and convergence .....	27
Stability .....	30
The effects of increasing the number of grid points .....	39
Summary .....	41
Problems .....	43
<b>CHAPTER 3      <i>A Survey of Time-Differencing Schemes for the Oscillation and Decay Equations</i></b>	<b><i>45</i></b>
Introduction .....	45
Non-iterative schemes. ....	45
Explicit schemes ( ) .....	49
Implicit schemes .....	51
Iterative schemes .....	53
Finite-difference schemes applied to the oscillation equation .....	54
Non-iterative two-level schemes for the oscillation equation .....	56
Iterative two-level schemes for the oscillation equation .....	59
The leapfrog scheme for the oscillation equation .....	60
The second-order Adams Bashforth Scheme ( $m=0$ , $l=1$ ) for the oscillation equation .....	69
A survey of time differencing schemes for the oscillation equation .....	70
Finite-difference schemes for the decay equation .....	71
Damped oscillations .....	74
Nonlinear damping .....	74
Summary .....	79

A Proof that the Fourth-Order Range-Kutta Scheme has Fourth-Order Accuracy .....	80
Problems .....	85

## **CHAPTER 4      *A closer look at the advection equation*      87**

Introduction .....	87
Conservative finite-difference methods .....	90
Examples of schemes with centered space differencing .....	95
Computational dispersion .....	102
The effect of fourth-order space differencing on the phase speed .....	108
Space-uncentered schemes .....	109
Hole filling .....	113
Flux-corrected transport .....	114
Lagrangian schemes .....	117
Semi-Lagrangian schemes .....	118
Two-dimensional advection .....	121
Summary .....	123
Problems .....	124

## **CHAPTER 5      *Boundary-value problems*      127**

Introduction .....	127
Solution of one-dimensional boundary-value problems .....	128
Jacobi relaxation .....	130
Gauss-Seidel relaxation .....	133
Over-relaxation .....	134
The alternating-direction implicit method .....	135
Multigrid methods .....	135
Summary .....	136

## **CHAPTER 6      *Diffusion*      141**

Introduction .....	141
A simple explicit scheme .....	143
An implicit scheme .....	144
The DuFort-Frankel scheme .....	145
Summary .....	147
Problems .....	148

---

## **CHAPTER 7      *Making Waves*      149**

Classification of second-order partial differential equations .....	149
The wave equation .....	150
Hyperbolic systems of first-order partial differential equations .....	154
Staggered grids .....	158
Numerical simulation of geostrophic adjustment. ....	160
Time differencing schemes for the shallow-water equations .....	166
Conservation of mass, kinetic energy, and potential energy in one-dimensional divergent flow .....	170
Summary .....	177
Problems	179

## **CHAPTER 8      *Boundary conditions and nested grids*      183**

Introduction .....	183
Inflow Boundaries .....	183
Outflow boundaries .....	189
Advection on nested grids .....	195
Analysis of boundary conditions for the advection equation using the energy method .....	202
Physical and computational reflection of gravity waves at a wall .....	205
Boundary conditions for the gravity wave equations with an advection term .....	208
The energy method as a guide in choosing boundary conditions for gravity wave .....	209
Summary .....	212
Problem .....	212

## **CHAPTER 9      *Aliasing instability*      213**

Aliasing error .....	213
Advection by a variable, non-divergent current .....	216
Fjortoft's Theorem .....	225
Kinetic energy and enstrophy conservation in two-dimensional non-divergent flow .....	230
Angular momentum conservation .....	240
Conservative schemes for the two-dimensional shallow water equations with rotation .....	241
The effects of time differencing on energy conservation .....	246
Summary .....	248
Problems .....	249

---

**CHAPTER 10      *Finite Differences on the Sphere*      251**

Introduction .....	251
Coordinate systems and map projections .....	252
Latitude-longitude grids and the “pole problem” .....	257
Kurihara’s grid ‘ .....	263
The Wandering Electron Grid .....	264
Spherical geodesic grids .....	264
Summary .....	270

**CHAPTER 11      *Spectral Methods*      271**

Introduction .....	271
Spectral methods on the sphere .....	279
The “equivalent grid resolution” of spectral models .....	284
Semi-implicit time differencing .....	285
Conservation properties and computational stability .....	286
Moisture advection .....	286
Physical parameterizations .....	287
Summary .....	287
Problems .....	289

**CHAPTER 12      *Vertical Differencing for Quasi-Static Models*      291**

Introduction .....	291
General vertical coordinate .....	291
Vertical coordinate systems .....	294
Height.....	294
Pressure .....	298
Log-pressure .....	299
The $\sigma$ -coordinate .....	300
More on the HPGF in $\sigma$ -coordinates .....	303
Hybrid sigma-pressure coordinates .....	304
The $\theta$ -coordinate .....	304
Potential temperature .....	306
Entropy .....	308
Hybrid $\sigma - \theta$ coordinates .....	309
Summary of vertical coordinate systems .....	309
Vertical staggering .....	311
Conservation properties of vertically discrete models using $\sigma$ -coordinates .....	312
Summary and conclusions .....	323

List of Tables .....	325
List of figures .....	327
References and Bibliography .....	335
